API (Push or Restful), S3, FTP, login

6.5+ years of back-testable time-series forecast history

Forecasting dividends since 2011 and systematically since 2016

96% annual repeat business rate

About Us

Our hybrid forecasts predict when and how much over 32,000 securities will pay out in dividends up to 4 full fiscal years ahead.

These forecasts are valuable for activities including pricing and trading options, stock selection, income planning, and index calculation.

Algorithmically calculated and manually analyzed, we work from a huge database of global corporate actions to build up patterns and forecast with a high level of accuracy.

All data is published live intraday via API, regular FTP push in flat-file format, or via direct login with a high level of accuracy, at scale.

We are a dividend forecast data specialist established in 2011 serving clients globally from our offices in London, New York, and Vancouver.
